1 Introduction

This document lists all instruments/modules that Chromleon 7 currently supports. The following information is included:

- **Manufacturer – System/Family:** Lists the manufacturer and the name of the instrument system or family.
- **Type:** Shows the type of module (e.g. Pump, Photodiode Array Detector).
- **Model:** Provides the model number of the instrument or module.
- **Firmware:** Displays the required firmware version (depending on module, check *Chromleon Online Help* for additional information).
 - For Thermo Scientific equipment generally, the firmware version is shipped on the installation media with the current Chromleon version listed.
 - For third party equipment; the firmware listed is usually the version used to test the driver and as such is considered the minimum firmware requirement for Chromleon. However, this does not necessarily imply that earlier versions of firmware are incompatible but that some limitations in functionality may be observed when using older firmware. In general, newer firmware versions are expected to work.
- **Interface Type:** Describes the type of connection used between the instrument and the PC.
- **Instrument Class:** Displays the License Class required to control the instrument in Chromleon 7.
- **Options Required:** Displays additional licenses required to fully control the instrument and shows whether an analog-digital data converter (e.g., UCI, A2D) is required for data acquisition (important for third-party detectors).

License	Abbreviation	Description
Instrument Class 1	1	License enabling control of Thermo Scientific Instruments – included in the Instrument Controller license
Instrument Class 2	2	License enabling control of third-party GCs
Instrument Class 3	3	License enabling control of third-party LCs
3D Data Acquisition	3D	License that enables recording 3D data e.g. from Photodiode Array Detectors
Universal Chromatography Interface	UCI	Device to convert analog signals to digital signals. Also provides RS232 ports and relays.
Analog to Digital Converter	A2D	Device to convert analog signals to digital signals. It can also be used as a remote injection device and to provide relays.
GC-MS Control	GC-MS	License enabling control of GC-MS devices
LC-MS Control	LC-MS	License enabling control of LC-MS and IC-MS devices
Fraction Collection	FC	License enabling Fraction Collection

- **Required Chromleon Version:** Displays the minimum version required to control the Instrument. If a Service Release (SR) or Maintenance Update (MU) is required, the SR or MU number is mentioned in the table.
 - + Indicates the minimum recommended version (an earlier version/SR/MU may support the device, but the recommended version adds significantly better support).
- **Operating Systems:** Displays the compatible operating systems for each module.

Operating System	Abbreviation	Description
Windows 8.1 (64 bit)	8.1 ⁶⁴	Professional or Enterprise*
Windows 10 (64 bit)	10 ⁶⁴	Professional or Enterprise*

*Because the incremental features of the Enterprise edition are not relevant to Chromeleon, Thermo Fisher Scientific Inc. does not expect any problems to occur when using Chromeleon with the different Windows Enterprise versions.

Notes:

- Microsoft ended support for the Windows 7 Operating System on 14 January, 2020. Accordingly, with the release of Chromeleon 7.2.10 MUa, official support for Windows 7 has been deprecated. However, for legacy reasons some devices in the tables below still list Windows 7 support. Those listings do not imply any official support for control under Windows 7.
- Some older and uncommon instrument modules do not list support for either Windows 8.1 or Windows 10. Based on the extensive validation on Windows 7 in the past it is anticipated, but not guaranteed, that these drivers will function correctly with Windows 10.

- **247 Instrument Controller:** Displays the model of 247 Instrument Controller and firmware version on which this instrument is supported.

Category	Abbreviation	Description
Model	TDS5	247 Instrument Controller TDS5 model
Firmware	WES7	Windows Embedded Standard 7 (64 bit)
Firmware	10	Windows LTSC 10 (1809)

Note: Changes to this document since the previous release of Chromeleon 7 are highlighted in yellow.

Caution: Consult the *Chromeleon Instrument Configuration Manager Help* for full details on licensing, cabling, and other requirements for control and data acquisition, supported functions, and limitations.

3 Thermo Scientific MS Support in Chromeleon 7

Drivers to control Thermo Scientific single quadrupole mass spectrometers are included in the Chromeleon distributable. Specific model and compatibility information is provided in Section 2, above.

Control of other Thermo Scientific mass spectrometers is provided by separately installed drivers. Customers with support contracts may access the following download locations for the current drivers as well as important information about model and version compatibility:

Thermo Scientific Digital Science Support Resource Center

<https://support.thermoinformatics.com/login.aspx>

Thermo Scientific Life Sciences Mass Spectrometry Software Download and Licensing Portal

<https://thermo.flexnetoperations.com/control/thmo/login>

If you do not have access to either of the above locations, please contact your local Thermo Scientific representative.

- [1] The Agilent 6850 GC driver has not been tested on Windows 7 or Windows 8.1. Based on extensive validation on Windows XP in the past it is anticipated, but not guaranteed, that it will function correctly.
- [2] Not all modules are controlled by all versions of Agilent ICF. Details of Agilent ICF instrument control support may be found at <http://www.agilent.com/en-us/products/liquid-chromatography/icf> and <http://www.agilent.com/cs/library/usermanuals/public/DriverReleaseNoteA0214.pdf>. Please also refer to the Chromleon Release Notes for limitations on the support of some modules.
- [3] Windows 10 support requires Agilent Instrument Control Framework version A.02.14 or higher.
- [4] Windows 7 only. Agilent 7697 Headspace requires Agilent Instrument Control Framework: A.02.03 DU1-HF2 or higher.
- [5] Uses external OCX.
- [6] Waters Driver Pack based driver. Waters Driver Pack 2017 R2 required (compatible with Windows 7 and Windows 10).
- [7] PerkinElmer Clarus GC's provide a number of different FW versions: Entire system (not readable via RS232), AutoSystem board, PPC sub system and Autosampler.
- [8] Uses external DLL.
- [9] Extended support for the PerkinElmer Clarus 400, 480, 580, 590 and 690 GC's has not been fully tested. It is anticipated, but not guaranteed, that it will function correctly.
- [10] Please contact your local Shimadzu Customer Support for a driver appropriate to your operating system.
- [11] This driver is compatible with Chromleon 7.2.6 and higher and supersedes the MS Software Installation Guide recommendation regarding the MSQ.
- [12] TSQ Quantiva and Endura support were introduced with Chromleon 7.2SR2 MUa. However, these instruments are compatible with the same instrument control software v3.0 as the TSQ Altis and Quantis.
- [13] Exactive Series 2.9 should only be used in workstation environments and is not included on the Chromleon DVD. Enterprise users should only use Exactive Series 2.8SP1 at this time. Please contact your Chromleon support representative for details on upgrading. Note that upgrading the driver will also involve upgrading to Foundation 3.1, which is not supported for other drivers should you later change which model of MS you wish to control.
- [14] TSQ Series II Control of the Altis and Quantis should only be used in workstation environments and is not included on the Chromleon DVD. Please contact your Chromleon support representative for details on upgrading. Note that upgrading the driver will also involve upgrading to Foundation 3.1, which is not supported for other drivers should you later change which model of MS you wish to control.
- [15] At high acquisition rates (100 to 200Hz) with long run times, there is an increased risk of problems which will then lead to a sequence abort.
- [16] After a TRACE 1300 GC firmware upgrade, a "Get Configuration" must be performed on any existing TRACE1300 instruments in order for the new firmware version to be stored in the configuration and option to use the 600 Hz acquisition rate to become available in Chromleon.

[17] The model number listed and later versions (model number with suffixes e.g. -01 or -02) are supported, if not otherwise noted.

[18] The PerkinElmer Clarus 500 GC driver has been tested with Chromeleon 7.2SR5 MUi on Windows 10. Support for the PerkinElmer Clarus 400, 480, 580, 590, 600, 680 and 690 on Windows 10 has not been tested. It is anticipated, but not guaranteed, that it will function correctly. Tests with Windows 10 and Startech PCI Multi I/O card did not reveal any differences in stability with respect to other Operating Systems. However, be aware that other Multi I/O solutions and corresponding Windows low level drivers still might have stability issues with Windows 10.

[19] It is not possible to control a column selection valve installed in a Waters Alliance 2695.

[20] Thermo Scientific 247 Instrument Controllers with Windows 10 firmware require Agilent ICF version A.02.06 Update 2 or higher to be installed.

[21] The driver currently available for the Keysight USB-to-GPIB adapter is not compatible with the security features of the Windows 10 Thermo Scientific 247 Instrument Controller, meaning GPIB connection cannot currently be used with the Windows 10 version of the 247 Instrument Controller.

[22] Thermo Scientific 247 Instrument Controllers with Windows 10 firmware require Waters Driver Pack 2019 R1 to be installed.

[23] Thermo Scientific FOCUS GC control with Thermo Scientific 247 Instrument Controller with Windows 10 firmware is only supported with USB-to-RS232 cable; a defect has been raised regarding PCIe RS232 card.

5 Obsolete Device Drivers

The following table lists instrument drivers that are considered obsolete. In some cases, they have been superceded by newer drivers which are incompatible with the old ones. They are included with the Chromleon distributable for backward compatibility. However, support for these drivers is limited to a best effort as resources permit.
